

# STREAM PCI DSS Application

The **PCI Data Security Standard (PCI DSS)** is a set of comprehensive requirements for enhancing payment card data security. Users of STREAM are able to plan and coordinate their PCI DSS compliance programmes, record compliance and schedule checks for maintaining compliance, with recurring checks scheduled automatically.

STREAM helps you to quickly create your requirements assessment programme, at your preferred level of detail, including for multiple payment channels / SAQs.

The built-in, extensive reporting capability provides views on compliance against the PCI DSS clauses and Milestones with trend analysis. Improvement actions can be raised and tracked and the residual payment card security risks monitored in real-time.

Risk visibility

Rapid deployment

Customisable

On-premise or SaaS

Intuitive

Value for money

Personalised dashboards

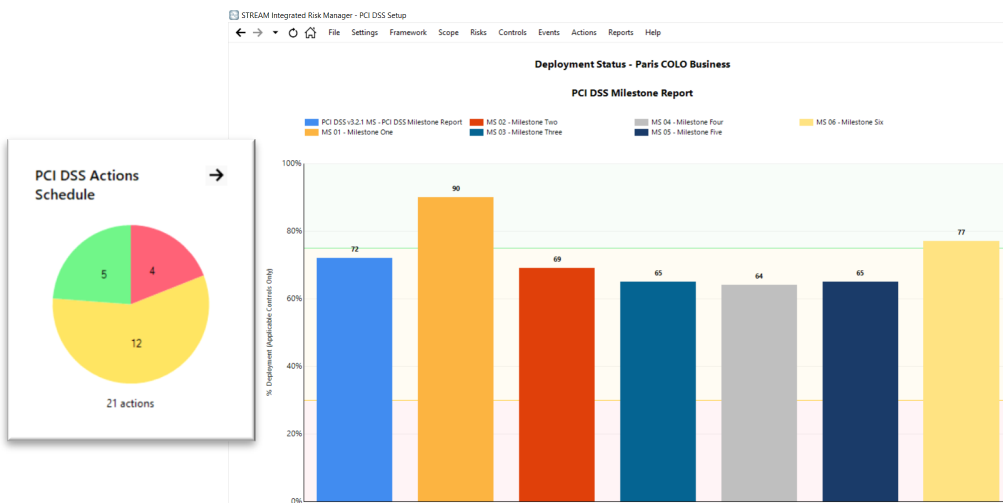

## Features

- Self-assess and report on compliance with the PCI DSS requirements for one or more defined payment channels across your business
- Automatic control selection for all available PCI DSS Self-Assessment Questionnaire (SAQ) types
- Optionally, define your locations, infrastructure assets, data and related entities such as service providers, and automatically produce/maintain your assessment programme
- For extensive PCI DSS scopes where an SAQ reduction approach is not available, use the built-in Prioritized Approach (Milestone) reporting to track progress as you work towards full compliance
- Automatically schedule future checks and receive email reminders
- Raise, assign and track actions for remediation with notifications and email reminders

- Maintain a history of all assessments and decisions with evidence to show auditors
- Coordinate concurrent assessments for multiple payment channels across your organisation
- Align your PCI DSS programme with other initiatives, such as GDPR, ISO 27001 and Cyber Essentials, by making linkages between the PCI DSS requirement and controls in other relevant control frameworks
- Use the rich set of built-in tabular and graphical progress and management reports, plus use STREAM's Report Builder to design and create your own unlimited custom reports
- Single-user or enterprise-wide deployment with role-based access control

### Example reports

### Benefits

- Rapid identification of applicable PCI DSS requirements, based on your payment channels / SAQs, and defined at your preferred level of granularity
- Support both for established PCI DSS compliant environments, and for organisations starting their PCI DSS programme from scratch
- Improve staff productivity by reducing the time required to gather, collate and report on compliance status against PCI DSS
- Avoid the risk of lapsed compliance from missed assessments and checks, particularly for requirements which need to be revisited at recurring intervals throughout the year
- Reduce the risk of incidents resulting from non-compliances saving costs associated with incident response, direct losses and reputational damage
- Reduce the cost of compliance audits by having up-to-date PCI DSS compliance status information available on demand.

If you would like access to the PCI DSS content for STREAM please contact us or visit the Acuity website for more information.
